Subject: Sediment Core Icing Update

---

Good Morning,

Luke Smith from Geosyntec informed me that he spoke with upper management, Keith and Nikki, about managing the the cores and revising the current storage system. They are in the process of looking for a solution to properly store them. For today, the plan is the ice the upper portion of the cores, and cover/sheild the portion of the core that was exposed (as seen in photos yesterday). I will update with a photo once we complete our first core for the day to ensure this method complies with requirements.

Jonni
